```

# 1 Garbage collection semantics

Model dynamics using judgement of the form:

$$V, H, R, F \vdash e \Downarrow v, H', F'$$

Where  $V: \mathsf{Var} \to \mathsf{Val} \times \mathsf{State}$ ,  $H: \mathsf{Loc} \to \mathsf{Val}$ ,  $R \subseteq \mathsf{Loc}$ , and  $F \subseteq \mathsf{Loc}$ . This can be read as: under stack V, heap H, roots R, freelist F, the expression e evaluates to v, and engenders a new heap H' and freelist F'.

Note that the stack maps each variable to a value v and a state s. If s is alive, then v can still be used, while dead indicates that v is already used and cannot be used again. We write  $\overline{V} = \{x \in V \mid V(x) = (\_, \mathtt{alive})\}$  for the variables in V that are alive.

Roots represents the set of locations required to compute the continuation *excluding* the current expression. We can think of roots as the heap allocations necessary to compute the context with a hole that will be filled by the current expression.

Below defines the size of reachable values and space for roots:

$$locs_{V,H}(e) = \bigcup_{x \in FV(e)} \{l \in H \mid \exists l' \in root(x).H \models p : l' \leadsto l\}$$
  
$$size(\langle v_1, v_2 \rangle) = size(v_1) + size(v_2)$$
  
$$size(\_) = 1$$

$$\begin{split} copy(H,L,\langle v_1,v_2\rangle) &= \\ \text{let } L_1 \subseteq L \text{with } |L_1| = size(v_1) \text{ in } \\ \text{let } H_1, \_ &= copy(H,L_1,v_1) \text{ in } \\ copy(H_1,L\setminus L_1,v_2) \\ copy(H,l,v) &= H[l\mapsto v], l \end{split}$$

$$\frac{V(x) = (v, \text{alive})}{V, H, R, F \vdash x \Downarrow v, H, F}(S_1) \qquad V, H, R, F \vdash \overline{n} \Downarrow \text{val}(n), H, F}(S_2)$$

$$\overline{V, H, R, F \vdash T \Downarrow \text{val}(T), H, F}(S_3) \qquad \overline{V, H, R, F \vdash \overline{n} \Downarrow \text{val}(n), H, F}(S_4)$$

$$\overline{V, H, R, F \vdash T \Downarrow \text{val}(T), H, F}(S_5)$$

$$\overline{V, H, R, F \vdash T \Downarrow \text{val}(Null), H, F}(S_5)$$

$$\frac{V(x) = T \qquad g = \{l \in H \mid l \notin F \cup R \cup locs_{V,H}(e_1)\} \qquad V, H, R, F \cup g \vdash e_1 \Downarrow v, H', F'}{V, H, R, F \vdash \text{if}(x; e_1; e_2) \Downarrow v, H', F'} (S_5)$$

$$\overline{V(x)} = F \qquad g = \{l \in H \mid l \notin F \cup R \cup locs_{V,H}(e_2)\} \qquad V, H, R, F \cup g \vdash e_2 \Downarrow v, H', F'}{V, H, R, F \vdash \text{if}(x; e_1; e_2) \Downarrow v, H', F'} (S_7)$$

$$\frac{l \in F \qquad F' = F \setminus \{l\} \qquad H' = H[l \mapsto (V, x.e)]}{V, H, R, F \vdash \text{lam}(x : x.e) \Downarrow l, H', F'} (S_8)$$

$$\frac{V(f) = (V_1, x.e) \qquad V(x) = v_1 \qquad V_1[x \mapsto v_1], H, R \vdash e \Downarrow v, H', F'}{V, H, R, F \vdash f(x) \Downarrow v, H', F'} (S_9)$$

$$\frac{V(x_1) = v_1 \qquad V(x_2) = v_2}{V, H, R, F \vdash (x_1, x_2) \Downarrow (v_1, v_2), H, F} (S_{10})$$

$$\frac{V(x) = (v_1, v_2)}{V, H, R, F \vdash \text{case } x \{(x_1; x_2) \mapsto e\} \Downarrow v, H', F'} (S_{11})$$

$$\frac{g = \{l \in H \mid l \notin F \cup R \cup locs_{V,H}(e)\} \qquad V[x_1 \mapsto v_1, x_2 \mapsto v_2], H, R, F \cup g \vdash e \Downarrow v, H', F'}{V, H, R, F \vdash \text{case } x \{(x_1; x_2) \mapsto e\} \Downarrow v, H', F} (S_{12})$$

$$\frac{v = \langle V(x_1), V(x_2) \rangle \qquad L \subseteq F \qquad |L| = \text{size}_H(v) \qquad F' = F \setminus L \qquad H', l = \text{copy}(H, L, v)}{V, H, R, F \vdash \text{cons}(x_1; x_2) \Downarrow l, H', F'} (S_{13})$$

$$\frac{V(x) = \text{Null} \qquad g = \{l \in H \mid l \notin F \cup R \cup locs_{V',H}(e_1)\} \qquad V, H, R, F \cup g \vdash e_1 \Downarrow v, H', F'}{V, H, R, F \vdash \text{case } x \{\text{nil} \mapsto e_1 \mid \text{cons}(x_h; x_t) \mapsto e_2 \} \Downarrow v, H', F'} (S_{14})$$

$$\frac{V(x) = (l, \text{alive})}{V, H, R, F \vdash \text{case } x \{\text{nil} \mapsto e_1 \mid \text{cons}(x_h; x_t) \mapsto e_2 \} \Downarrow v, H', F'}{V, H, R, F \vdash \text{case } x \{\text{nil} \mapsto e_1 \mid \text{cons}(x_h; x_t) \mapsto e_2 \} \Downarrow v, H', F'} (S_{15})$$

$$\frac{R' = R \cup locs_{V',H}(\text{lam}(x : \tau.e_2)) \qquad V, H, R', F \vdash \text{e} \psi, H_1, H_1, F_1 \cup f' = v_2 \Downarrow v_2, H_2, F_2}{V, H, R, F \vdash \text{let}(e_1; x : \tau.e_2) \Downarrow v_2, H_2, F_2}$$

# 2 Operational semantics

In order to prove the soundess of the type system, we also define a simplified operational semantics that does not account for garbage collection.

$$V, H \vdash e \Downarrow v, H'$$

This can be read as: under stack V, heap H the expression e evaluates to v, and engenders a new heap H'. We write the representative rules.

$$\frac{v = \langle V(x_1), V(x_2) \rangle \qquad H', l = copy(H, L, v)}{V, H \vdash \mathsf{cons}(x_1; x_2) \Downarrow l, H'} (S_{17})$$

$$\frac{V(x) = (l, \mathsf{alive}) \qquad H(l) = \langle v_h, v_t \rangle \qquad V' = V\{x \mapsto (l, \mathsf{dead})\}}{V'' = V'[x_h \mapsto (v_h, \mathsf{alive}), x_t \mapsto (v_t, \mathsf{alive})] \qquad V'', H \vdash e_2 \Downarrow v, H'} (S_{18})$$

$$\frac{V, H \vdash e_1 \Downarrow v_1, H_1 \qquad V' = V[x \mapsto v_1] \qquad V', H_1 \vdash e_2 \Downarrow v_2, H_2}{V, H \vdash \mathsf{let}(e_1; x : \tau.e_2) \Downarrow v_2, H_2} (S_{19})$$

# 3 Type rules

The type system takes into account of garbaged collected cells by returning potential locally in a match construct. Since we are interested in the number of heap cells, all constants are assumed to be nonnegative.

$$\frac{n \in \mathbb{Z}}{\Sigma; \emptyset \left| \frac{q}{q} \ n : \mathrm{nat}} (\mathrm{L:ConstI}) \qquad \frac{\Sigma; \emptyset \left| \frac{q}{q} \ () : \mathrm{unit}}{\Sigma; \emptyset \left| \frac{q}{q} \ n : \mathrm{nat}} (\mathrm{L:ConstF}) \qquad \frac{\Sigma; \emptyset \left| \frac{q}{q} \ T : \mathrm{bool}}{\Sigma; \emptyset \left| \frac{q}{q} \ F : \mathrm{bool}} (\mathrm{L:ConstF}) \qquad \frac{\Sigma; \Gamma \left| \frac{q}{q'} \ e_t : B \right| \Sigma; \Gamma \left| \frac{q}{q'} \ e_f : B \right|}{\Sigma; \Gamma, x : \mathrm{bool} \left| \frac{q}{q'} \ \text{if} \ x \ \text{then} \ e_t \ \text{else} \ e_f : B} (\mathrm{L:Cond}) \qquad \frac{\Sigma; \Gamma, x_1 : A_1, x_2 : A_2 \left| \frac{q}{q'} \ e_1 : B \right|}{\Sigma; \Gamma, x_1 : A_1, x_2 : A_2 \left| \frac{q}{q'} \ e_1 : B \right|} (\mathrm{L:MatP}) \qquad \frac{\Sigma; \Gamma, x_1 : A_1, x_2 : A_2 \left| \frac{q}{q'} \ e_1 : B \right|}{\Sigma; \Gamma, x_1 : A_1, A_2 : A_2 \left| \frac{q}{q'} \ e_1 : B \right|} (\mathrm{L:MatP}) \qquad \frac{\Sigma; \emptyset \left| \frac{q}{q} \ \mathrm{nil} : L^p(A) \right|}{\Sigma; \Gamma, x_1 : A_1, x_2 : A_2 \left| \frac{q}{q'} \ e_1 : B \right|} (\mathrm{L:MatP}) \qquad \frac{\Sigma; 0 \left| \frac{q}{q} \ \mathrm{nil} : L^p(A) \right|}{\Sigma; \Gamma, x_1 : A_1, x_2 : A_2 : A_$$

Now if we take  $\dagger: L^p(A) \mapsto L(A)$  as the map that erases resource annotations, we obtain a simpler typing judgement  $\Sigma^{\dagger}$ ;  $\Gamma^{\dagger} \vdash e : B^{\dagger}$ .

# 4 Paths and aliasing

In order prove soundness of the type system, we need some auxiliary judgements to defining properties of a heap. Below we define  $reach: Val \rightarrow \{\{Loc\}\}\}$  that maps stack values its the root multiset, the multiset of locations that's already on the stack.

$$reach_H(\langle v_1, v_2 \rangle) = reach_H(v_1) \uplus reach_H(v_2)$$
  
 $reach_H(l) = \{l\} \cup reach_H(H(l))$   
 $reach_H(-) = \emptyset$ 

For a multiset S, we write  $\mu: S \to \mathbb{N}^+$  for the multiplicity function of S, which maps each element to the count of its occurrence. If  $\forall s \in S.\mu(s) = 1$ , then S is a property set, and we denote it by set(S).

Next, we define the predicates no\_alias:

no\_alias
$$(V, H)$$
:  $\forall x, y \in \overline{V}, x \neq y$ . Let  $r_x = reach_H(\overline{V}(x)), r_y = reach_H(\overline{V}(y))$ . Then:

(1)  $set(r_x), set(r_y)$ 

(2) 
$$r_x \cap r_y = \emptyset$$

 $\mathsf{no\_ref}(V, H, v)$ : There is no such  $x \in \overline{V}$  s.t.  $l \in reach_H(v) \cap \bigcup_{x \in \overline{V}} reach_H(V(x))$ .

If the induced graph of heap H is a forest, then it is a disjoint union of arborescences (directed trees), and there is at most one path from one loaction in H to another by following the pointers.

# 5 Soundness for garbage collection semantics

We simplify the soundness proof of the type system for the general metric to one with monotonic resource. (No function types for now)

**Lemma 1.1.** If  $\Sigma$ ;  $\Gamma \mid \frac{q}{q'} e : B$ , then  $\Sigma^{\dagger}$ ;  $\Gamma^{\dagger} \vdash e : B^{\dagger}$ .

**Lemma 1.2.** If  $V, H, R, F \vdash e \Downarrow v, H', F'$ , then  $\forall x \in V$ ,  $reach_H(V(x)) = reach_{H'}(V(x))$ .

**Lemma 1.3.** For all stacks V and heaps H, if  $\operatorname{no\_alias}(V,H)$ ,  $\Sigma^{\dagger}; \Gamma^{\dagger} \vdash e : B^{\dagger}$ ,  $F \cap R = \emptyset$ ,  $(F \cup R) \cap locs_{V,H}(e) = \emptyset$ ,  $H \models V : \Gamma$ , and  $V,H,R,F \vdash e \Downarrow v,H',F'$ , then  $\operatorname{set}(reach_{H'}(v))$ ,  $R \cap reach_{H'}(v) = \emptyset$ ,  $F' \cap R = \emptyset$ ,  $\operatorname{no\_ref}(V,H,v)$ , and  $\operatorname{no\_alias}(V,H')$ .

*Proof.* Nested induction on the evaluation judgement and the typing judgement.

#### Case 7: E:Let

$$V, H, R, F \vdash \mathsf{let}(e_1; x : \tau.e_2) \Downarrow v_2, H_2, F_2 \tag{case}$$

$$V, H, R', F \vdash e_1 \Downarrow v_1, H_1, F_1 \tag{ad.}$$

$$\Sigma; \Gamma_1, \Gamma_2 \mid_{\overline{q}}^q \mathsf{let}(e_1; x : \tau.e_2) : B \tag{case}$$

$$\Sigma; \Gamma_1 \mid_{\overline{p}}^q e_1 : A \tag{ad.}$$

$$\Sigma^\dagger; \Gamma_1^\dagger \vdash e_1 : A^\dagger \tag{Lemma 1.1}$$

$$\Sigma; \Gamma_2, x : A \mid_{\overline{q'}}^p e_2 : B \tag{ad.}$$
Suppose no\_alias $(V, H), F \cap R = \emptyset set, (F \cup R) \cap locs_{V,H}(e) = \emptyset, \text{ and } H \vDash V : \Gamma$ 

$$H \vDash V : \Gamma_1 \tag{def of W.D.E}$$

$$F \cap R' = \emptyset \text{ since } F \cap locs_{V,H}(e) = \emptyset$$

$$R' \cap locs_{V,H}(e_1) = \emptyset \tag{no_alias}(V, H)$$

$$(F \cup R') \cap locs_{V,H}(e_1) = \emptyset \tag{Sp.}$$

#### Case 13: E:MatCons

$$V(x) = (l, alive)$$
 (ad.)

By IH,  $set(reach_{H_1}(v_1)), R' \cap reach_{H_1}(v_1) = \emptyset, F_1 \cap R' = \emptyset, \text{ and no\_alias}(V, H_1)$ 

$$H(l) = \langle v_h, v_t \rangle \qquad (ad.) \\ \Gamma = \Gamma', x : L^p(A) \qquad (ad.) \\ \Sigma; \Gamma', x_h : A, x_t : L^p(A) \Big| \frac{q+p+1}{q'} e_2 : B \qquad (ad.) \\ \Sigma; \Gamma', x_h : A, x_t : L^p(A) \Big| \frac{q+p+1}{q'} e_2 : B \qquad (ad.) \\ V'', H, R, F \cup g \vdash e_2 \Downarrow v_2, H_2, F' \qquad (ad.) \\ \text{Suppose no_alias}(V, H), F \cap R = \emptyset, \text{ and } H \vDash V : \Gamma \\ H \vDash V(x) : L^p(A) \qquad (ad.) \\ H \vDash v_h : A, H'' \vDash v_t : L^p(A) \qquad (ad.) \\ H \vDash v_h : A, H \vDash v_t : L^p(A) \qquad (???) \\ H \vDash V'' : \Gamma', x_h : A, x_t : L^p(A) \qquad (def of W.D.E) \\ \text{NTS no_alias}(V'', H) \qquad (def of W.D.E) \\ \text{NTS no_alias}(V'', H) \qquad (ad.) \\ \text{Let } x_1, x_2 \in \overline{V}'', x_1 \neq x_2, r_{x_1} = reach_H(\overline{V}''(x_1)), r_{x_2} = reach_H(\overline{V}''(x_2)) \\ \text{case: } x_1 \notin \{x_h, x_t\}, x_2 \notin \{x_h, x_t\} \\ (1), (2) \text{ from no_alias}(V, H) \qquad (ad.) \\ \text{case: } x_1 = x_h, x_2 \notin \{x_h, x_t\} \\ \text{set}(r_{x_1}) \text{ since set}(H(l)) \text{ from no_alias}(V, H) \\ \text{set}(r_{x_2}) \text{ since no_alias}(V, H) \\ \text{AFSOC, suppose } t' \in r_{x_1} \cap r_{x_2} \\ \text{but } reach_H(\overline{V}(x)) \cap r_{x_2} = \emptyset, \text{ contradiction} \\ \text{hence } r_{x_1} \cap r_{x_2} = \emptyset \\ \text{case: } x_1 = x_h, x_2 = x_t \\ \text{set}(r_{x_1}) \text{ since set}(H(l)) \text{ from no_alias}(V, H) \\ \text{AFSOC, suppose } t' \in r_{x_1} \cap r_{x_2} \\ \text{but then } \mu_{reach_H(t)}(t') \geq 2, \text{ and set}(H(t)) does not hold.} \\ \text{hence } r_{x_1} \cap r_{x_2} = \emptyset \\ \text{case: otherwise} \\ \text{similar to the above} \\ \text{Thus we have no_alias}(V'', H) \\ (F \cup g) \cap R = \emptyset \text{ since } F \cap R = \emptyset \\ \text{By IH, set}(reach_{H'}(v)), F' \cap R = \emptyset, \text{ and no_alias}(V'', H') \\ \text{NTS no_alias}(V, H') \\ \text{Follows from Lemma...}$$

**Task 1.4** (Soundness). let  $H \vDash V : \Gamma$ ,  $\Sigma$ ;  $\Gamma \vdash_{q'}^{q} e : B$ , and  $V, H \vdash e \Downarrow v, H'$ . Then  $\forall C \in \mathbb{Q}^+$  and  $\forall F \subseteq \mathsf{Loc} \ with \ |F| \ge \Phi_{V,H}(\Gamma) + q + C$ , if  $\mathsf{no\_alias}(V)$ ,  $R \cap locs_{V,H}(e) = \emptyset$ , and  $F \cap locs_{V,H}(e) = \emptyset$ ,

then there exists  $F' \subseteq \text{Loc } s.t.$ 

1. 
$$V, H, R, F \vdash e \Downarrow v, H', F'$$

2. 
$$|F'| > \Phi_{H'}(v:B) + q' + C$$

*Proof.* Induction on the evaluation judgement.

#### Case 1: E:Var

$$V, H, R, F \vdash x \Downarrow V(x), H, F$$

$$\Sigma; x : B \mid \frac{q}{q} x : B$$

$$|F| - |F'|$$
