```

1 Garbage collection semantics

Model dynamics using judgement of the form:

$$V, H, R, F \vdash e \Downarrow v, H', F'$$

Where $V : \mathsf{Var} \to \mathsf{Val} \times \mathsf{State}$, $H : \mathsf{Loc} \to \mathsf{Val}$, and $R : \{\mathsf{Loc}\}$. This can be read as: under stack V, heap H, roots R, freelist F, the expression e evaluates to v, and engenders a new heap H' and freelist F'.

Note that the stack maps each variable to a value v and a state s. If s is alive, then v can still be used, while dead indicates that v is already used and cannot be used again. We write $\overline{V} = \{x \in V | V(x) = (_, \mathtt{alive})\}$ for the variables in V that are alive.

Roots represents the set of locations required to compute the continuation *excluding* the current expression. We can think of roots as the heap allocations necessary to compute the context with a hole that will be filled by the current expression.

Below defines the size of reachable values and space for roots:

$$locs_{V,H}(e) = \bigcup_{x \in FV(e)} \{l \in H \mid \exists l' \in root(x).H \vDash p : l' \leadsto l\}$$

$$size(\langle v_1, v_2 \rangle) = size(v_1) + size(v_2)$$

 $size(_) = 1$

$$\begin{split} copy(H,L,\langle v_1,v_2\rangle) &= \\ \text{let } L_1 \subseteq L \text{with } |L_1| = size(v_1) \text{ in } \\ \text{let } H_1, _ &= copy(H,L_1,v_1) \text{ in } \\ copy(H_1,L\setminus L_1,v_2) \\ copy(H,l,v) &= H[l\mapsto v], l \end{split}$$

$$\frac{x \in dom(V)}{V, H, R, F \vdash x \Downarrow V(x), H, F}(S_1) \qquad \frac{V, H, R, F \vdash \overline{n} \Downarrow val(n), H, F}{V, H, R, F \vdash T \Downarrow val(T), H, F}(S_2) \qquad \frac{V, H, R, F \vdash \overline{n} \Downarrow val(T), H, F}{V, H, R, F \vdash T \Downarrow val(T), H, F}(S_4) \qquad \frac{V, H, R, F \vdash T \Downarrow val(T), H, F}{V, H, R, F \vdash () \Downarrow val(Null), H, F}(S_5)$$

$$\frac{V(x) = \mathsf{T} \qquad g = \{l \in H | l \notin F \cup R \cup locs_{V,H}(e_1)\} \qquad V, H, R, F \cup g \vdash e_1 \Downarrow v, H', F'}{V, H, R, F \vdash \mathsf{if}(x; e_1; e_2) \Downarrow v, H', F'} \qquad (S_6)$$

$$\frac{V(x) = \mathsf{F} \qquad g = \{l \in H | l \notin F \cup R \cup locs_{V,H}(e_2)\} \qquad V, H, R, F \cup g \vdash e_2 \Downarrow v, H', F'}{V, H, R, F \vdash \mathsf{if}(x; e_1; e_2) \Downarrow v, H', F'} \qquad (S_7)$$

$$\frac{l \in F \qquad F' = F \setminus \{l\} \qquad H' = H[l \mapsto (V, x.e)]}{V, H, R, F \vdash \mathsf{lam}(x : \tau.e) \Downarrow J, H', F'} \qquad (S_8)$$

$$\frac{V(x) = \langle V(x_1), V(x_2) \rangle \qquad L \subseteq F \qquad |L| = size_H(v) \qquad F' = F \setminus L \qquad H', l = copy(H, L, v)}{V, H, R, F \vdash \mathsf{case} \ x \ (s_1; x_2) \Downarrow l, H', F'} \qquad (S_{15})$$

$$\frac{V(x) = \mathsf{Null} \qquad g = \{l \in H | l \notin F \cup R \cup locs_{V',H}(e_1)\} \qquad V, H, R, F \cup g \vdash e_2 \Downarrow v, H', F'}{V, H, R, F \vdash \mathsf{case} \ x \ (s_1; x_2) \Downarrow l, H', F' \qquad (S_{14})$$

$$\frac{V(x) = \langle V(x_1), V(x_2) \rangle \qquad L \subseteq F \qquad |L| = size_H(v) \qquad V' + H, R, F \cup g \vdash e_2 \Downarrow v, H', F'}{V, H, R, F \vdash \mathsf{case} \ x \ (s_1; x_2) \Downarrow l, H', F' \qquad (s_1; x_2) \Downarrow l, H', F' \qquad (s_2; y) \qquad (s_1; y$$

2 Type rules

The type system takes into account of garbaged collected cells by returning potential locally in a match construct. Since we are interested in the number of heap cells, all constants are assumed to be nonnegative.

3 Paths and aliasing

In order prove soundness of the type system, we need some auxiliary judgements to defining properties of a heap. Below we define $root: Val \rightarrow \{\{Loc\}\}\$ that maps stack values its the root multiset, the multiset of locations that's already on the stack.

$$root(\langle v_1, v_2 \rangle) = root(v_1) \uplus root(v_2)$$

 $root(l) = \{l\}$
 $root(_) = \emptyset$

For a multiset S, we write $\mu: S \to \mathbb{N}^+$ for the multiplicity function of S, which maps each element to the count of its occurrence. If $\forall s \in S.\mu(s) = 1$, then S is a property set, and we denote it by $\mathsf{set}(S)$.

Next, we define the judgements $H \vDash p : l \leadsto l'$ for path formulation and $H \vDash p = p' : l \leadsto l'$ for path equality. A path can be thought of as a sequence of locations that is traversable by following pointers in the heap.

$$\frac{l \in H}{H \vDash id_{l} : l \leadsto l} (\text{Id}) \qquad \frac{H(l) = v \quad l' \in root(v) \quad l' \in H}{H \vDash (l, l') : l \leadsto l'} (\text{Edge})$$

$$\frac{H \vDash p : l \leadsto l' \quad H \vDash q : l' \leadsto l''}{H \vDash q \circ p : l \leadsto l''} (\text{Comp})$$

$$\boxed{\mathbf{H} \vDash p = p' : l \leadsto l'}$$

$$\frac{H \vDash p : l \leadsto l'}{H \vDash p \circ id_l \equiv p : l \leadsto l'} \text{(LeftID)} \qquad \frac{H \vDash p : l \leadsto l'}{H \vDash id_{l'} \circ p \equiv p : l \leadsto l'} \text{(RightID)}$$

$$\frac{H(l) = v \qquad l' \in root(v) \qquad l' \in HH \vDash p \equiv q : l' \leadsto l''}{H \vDash p \circ (l, l') \equiv q \circ (l, l') : l \leadsto l''} \text{(Eq)}$$

Note that it is not the case that $id_l \equiv (l, l) : l \rightsquigarrow l$, since the former is an actual identity, while the latter is an infinite loop in the heap: H(l) = l.

Next, we define the predicates linear H and no_alias:

 $linear_H(R_1, R_2)$: $\forall l \in H, \forall l_1 \in R_1, l_2 \in R_2, let H \models p : l_1 \leadsto l \text{ and } H \models q : l_2 \leadsto l, then <math>l_1 = l_2$ and $H \vDash p \equiv q : l_1 \leadsto l$.

no_alias(V, H): $\forall l \in H, \forall x, y \in \overline{V}, x \neq y.Letr_x = root(\overline{V}(x)), r_y = root(\overline{V}(y)).$ Then:

- (1) $set(root(H(l))), set(r_x), set(r_y)$
- (2) $r_x \cap r_y = \emptyset$
- (3) $linear_H(r_x, r_x)$, $linear_H(r_y, r_y)$, and $linear_H(r_x, r_y)$

Soundness for heap allocation

We simplify the soundness proof of the type system for the general metric to one with monotonic resource. (No function types for now)

Task 1.1 (Soundness). let
$$H \vDash V : \Gamma$$
. If $\Sigma ; \Gamma \left| \frac{q}{q'} e : B \text{ and } V, H, R, F \vdash e \Downarrow v, H', F', \text{ then } P \right|$

$$\begin{array}{ll} \text{1. If } \mathsf{no_alias}(V,H), \ R \cap locs_{V,H}(e) = \emptyset, \ \ and \ \ F \cap locs_{V,H}(e) = \emptyset, \ \ then \ \ |F| - |F'| \leq \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v:B) + q') \ \ and \ \ \mathsf{no_alias}(V,H'). \end{array}$$

Proof. Induction on the evaluation judgement.

Case 1: E:Var

$$V, H, R, F \vdash x \Downarrow V(x), H, F$$

$$\Sigma; x : B \mid_{\overline{q}}^{q} x : B$$

$$|F| - |F'|$$

$$= |F| - |F|$$

$$= 0$$

$$\Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v : B) + q')$$

$$= \Phi_{V,H}(x : B) + q - (\Phi_{H}(V(x) : B) + q)$$

$$= \Phi_{H}(V(x) : B) + q - (\Phi_{H}(V(x) : B) + q)$$

$$= 0$$

$$(1)$$

$$\Phi_{V,H}(\Gamma) + q - (\Phi_{H}(V(x) : B) + q)$$

$$= \Phi_{H}(V(x) : B) + q - (\Phi_{H}(V(x) : B) + q)$$

$$= 0$$

$$(2)$$

$$(3)$$

$$(4)$$

$$|F| - |F'| \le \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v : B) + q')$$

$$((3),(5))$$

Case 2: E:Const* Due to similarity, we show only for E:ConstI

 $\Gamma = \Gamma', x : bool$

$$|F| - |F'| = |F| - |F|$$

$$= 0$$

$$\Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v:B) + q') = \Phi_{V,H}(\emptyset) + q - (\Phi_{H}(v:int) + q)$$

$$= 0$$

$$(\text{def of } \Phi_{V,H})$$

$$|F| - |F'| \le \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v:B) + q')$$

Case 4: E:App

Case 5: E:CondT

$$H \vDash V : \Gamma'$$
 (def of W.F.E)

$$\Sigma; \Gamma' \frac{q}{q'} e_t : B$$
 (ad.)

$$V, H, R, F \cup g \vdash e_t \Downarrow v, H', F'$$
 (ad.)

$$|F \cup g| - |F'| \le \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v : B) + q')$$
 (IH)

$$|F| - |F'| \le \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v : B) + q')$$

(ad.)

Case 6: E:CondF Similar to E:CondT

Case 7: E:Let

$$V, H, R', F \vdash e_1 \Downarrow v_1, H_1, F_1$$

$$\Sigma; \Gamma_1 \stackrel{q}{\mid_{\overline{p}}} e_1 : A$$

$$H \vDash V : \Gamma_1$$

$$|F| - |F_1| \le \Phi_{VH}(\Gamma_1) + q - (\Phi_{H_1}(v_1 : A) + p)$$

$$(ad.)$$

$$(T_1 \subseteq \Gamma)$$

$$(IH)$$

$$V', H_1, R, F_1 \cup g \vdash e_2 \Downarrow v_2, H_2, F_2 \qquad (ad.)$$

$$\Sigma; \Gamma_2, x : A \middle|_{q'}^p e_2 : B \qquad (ad.)$$

$$H_1 \vDash v_1 : A \text{ and} \qquad (Theorem 3.3.4)$$

$$H_1 \vDash V : \Gamma_2 \qquad (????)$$

$$H_1 \vDash V' : \Gamma_2, x : A \qquad (def of \vDash)$$

$$|F_1 \cup g| - |F_2| \le \Phi_{V', H_1}(\Gamma_2, x : A) + p - (\Phi_{H_2}(v_2 : B) + q') \qquad (IH)$$

$$|F_1| - |F_2| \le \Phi_{V', H_1}(\Gamma_2, x : A) + p - (\Phi_{H_2}(v_2 : B) + q')$$
summing the inequalities:
$$|F| - |F_1| + |F_1| - |F_2| \le \Phi_{V, H}(\Gamma_1) + q - (\Phi_{H_1}(v_1 : A) + p) + \Phi_{V', H_1}(\Gamma_2, x : A) + p - (\Phi_{H_2}(v_2 : B) + q')$$

$$|F| - |F_2| \le \Phi_{V, H}(\Gamma_1) + q - \Phi_{H_1}(v_1 : A) + \Phi_{V', H_1}(\Gamma_2, x : A) - (\Phi_{H_2}(v_2 : B) + q')$$

$$= \Phi_{V, H}(\Gamma_1) + \Phi_{V', H_1}(\Gamma_2) + q - \Phi_{H_1}(v_1 : A) + \Phi_{V', H_1}(x : A) - (\Phi_{H_2}(v_2 : B) + q')$$

$$\text{(def of } \Phi_{V, H})$$

$$m = \Phi_{V, H}(\Gamma_1) + \Phi_{V, H}(\Gamma_2) + q - \Phi_{H_1}(v_1 : A) + \Phi_{V', H_1}(x : A) - (\Phi_{H_2}(v_2 : B) + q')$$

$$\text{(Lemma 4.3.3)}$$

$$= \Phi_{V, H}(\Gamma) + q - \Phi_{H_1}(v_1 : A) + \Phi_{H_1}(v_1 : A) - (\Phi_{H_2}(v_2 : B) + q')$$

$$\text{(Lemma 4.3.3)}$$

$$= \Phi_{V, H}(\Gamma) + q - (\Phi_{H_2}(v_2 : B) + q')$$

Case 8: E:Pair Similar to E:Const*

Case 9: E:MatP Similar to E:MatCons

Case 10: E:Nil Similar to E:Const*

Case 11: E:Cons

$$\begin{split} |F| - |F'| &= |F| - |F \setminus \{l\}| &= |F| - |F \setminus \{l\}| \\ &= 1 \\ \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v:B) + q') \\ &= \Phi_{V,H}(x_h:A,x_t:L^p(A)) + q + p + 1 - (\Phi_{H'}(v:L^p(A)) + q) \\ &= \Phi_{V,H}(x_h:A,x_t:L^p(A)) + p + 1 - \Phi_{H'}(v:L^p(A))) \\ &= \Phi_H(V(x_h):A) + \Phi_H(V(x_t):L^p(A)) + p + 1 - \Phi_{H'}(v:L^p(A))) \\ &= \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A)) + p + 1 - \Phi_{H'}(v:L^p(A))) \\ &= \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A)) + p + 1 - (p + \Phi_{H'}(v_h:A) + \Phi_{H'}(v_t:L^p(A))) \\ &= \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A)) + p + 1 - (p + \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A))) \\ &= \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A)) + p + 1 - (p + \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A))) \\ &= \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A)) + p + 1 - (p + \Phi_H(v_h:A) + \Phi_H(v_t:L^p(A))) \\ &= 1 \end{split}$$
 Hence,
$$|F| - |F'| \leq \Phi_{V,H}(\Gamma) + q - (\Phi_{H'}(v:B) + q')$$

Case 12: E:MatNil Similar to E:Cond*
